## FIMCP0200 – Customer Pickup

This transaction captures the Pick Ticket, Employee and signature of the customer picking up the items described by the pick ticket.

A BMP file is created from the signature and saved to a hard drive location. This file can later be attached to a record in SAP if desired. The file name can be changed to anything but currently is a combination of document number, pick ticket and employee for easy reference.

The following conditions apply to the RFgen implementation for the Customer Pickup of Stock transaction within the SAP environment.

Note: any of these parameters may be easily adjusted to meet the unique requirements of your company.

### ✓ Validations

Prompt	Method of Validation
Pick Ticket	LTAK table
Employee	Not validated

### ✓ Edits

Condition	Special Circumstance

### ⇄ Function Keys

Key	Function
F3	Exit
F8	Submit value for the Current Screen Display

### Considerations

1. You may want to validate the Employee value
2. You may want to change the file name of the BMP created from the signature

## Basic Test Script

1. Enter a pick ticket
2. Enter an employee value
3. Create a signature

## Test Script Description: Customer Pickup

### Execution Procedures

ID	Test Case	Expected Result	Pass	Fail
1	Type in a valid Pick Ticket _____ Press the <b>ENTER</b> key	RFGEN will validate and accept the Pick Ticket entered.		
2	Type in an invalid Pick Ticket _____ Press the <b>ENTER</b> key	RFGEN will validate and display an error message – the field will continue to error out until corrected		
3	Type in an Employee value _____ Press the <b>ENTER</b> key	RFGEN will accept the Employee value entered.		
4	Fill in the signature field Press the <b>ENTER</b> key	RFGEN will accept the signature
