PRESS RELEASE

City of Houston Integrates RFgen Data Collection with SAP

EL DORADO HILLS, CA – March 13, 2009 – The City of Houston will soon be tracking their materials through SAP business functions and processes with RFgen Data Collection Software. RFgen's SAP Certified Integration Software is set to go live in Houston by April 2009. Through their implementation of this bar code data collection solution the Department of Public Works and Engineering will soon experience an enhanced level of improved tracking and accuracy. They estimate a savings of \$25,000 the first year in their warranty tracking system alone.

The City of Houston Department of Public Works and Engineering was looking for a flexible, Certified SAP solution to maintain inventory and warehouse levels. Fifty percent of their inventory applications could utilize RFgen's pre-built transactions, while the other applications required some modifications to match their SAP business processes. The RFgen transactions that the City Of Houston is incorporating include Cycle Count, Customer Pickup, Direct Issue, Return to Stock, Inventory Transfers, Bin to Bin Transfer, Purchase Order Receipt by Line, Transfer Confirmation, Picking, Put Away, and Warranty Tracking.
